No. TO- 2403916-2-1/2

Page 1 of 2

Receipt date: 2024/5/1

Issuance date: 2024/5/21

Client: MONTELUCE/MARUYASU Corporation

The Japan Cotton & Staple Fiber Fabric Inspection Institute Foundation

Tokyo Test Center

Sample name: 2/58 PROOF PLUS ECO CLEAR

Number of sample: 2

Test method: JIS L 1902: 2015 Quantitative test (Absorption method - Plate count method)

Test performance period: May 13th to May 20th

Test results: As follows

	Sample color*1	Washing times <sup>*2</sup>	$logT_0$	$logT_t$	A*3
1	PCE07 WHITE	0	4.5	1.3	5.7
2	PCE07 WHITE	10	4.4	2.6	4.5
3					
4					
5					
6					

logT<sub>0</sub> is the common logarithm for the number of bacteria obtained from test specimens immediately after inoculation.

logT, is the common logarithm for the number of bacteria obtained from test specimens after 18h incubation.

A is the antibacterial activity value.

- \*1 We use 0.05% Polyoxyethylene sorbitanmono-oleate(Tween 80) as a surfactantat at inoculation. Test specimens are sterlized by autoclave.
- \*2 Washing methods by The Japan Textile Evaluation Technology Council(JTETC)'s documents 'Washing Methods for SEK Mark Textile Products".
- \*3 In case of  $logC_0 > logT_0$ . We calculate  $logT_0$  as  $logC_0$ .

Test bacteria(strain number)	Staphylococcus aureus (NBRC12732
Concentration of inocuium (CFU/mL)	1.5 × 10 <sup>5</sup> (CFU/mL)

## Judgement of test effectiveness

The number of bacteria obtained from control fabric *4 immediately after inoculation	(logC <sub>0</sub> )	4.5	Growth	2.5	≥ 1.0(effctive)
The number of bacteria obtained from control fabric*4 aftet 18h incubation	$(logC_t)$	7.0	value	2.5	≥ 1.0(encuve)

\*4 We use Cotton fabric obtain from JTETC as control fabric.
